ABSTRACT

Archaeology is the studies of the ancient human past through the material evidences that have been unearthed. This subject enumerates in detail, about the cultural heritage, civilization and various other aspects of material life of the ancient man, which helps us to correlate it with the modern world. Archaeology in a sense could also be considered as science since various scientific techniques have been involved in the process of exploration and excavation and also dating of the materials.

KEYWORDS: *Material Evidence, Geological and Physiological Factors, Historical Aspects*
