ABSTRACT

Education is the foundation for the development and progress of an individual and society. Although ICT based education is not a new concept for the Indian Education system, Open Educational Resources (OERs) present an underused concept for improving student access to learning in all educational contexts. This paper aims to create awareness about Open Educational Resources (OERs) by focusing on need of Open Educational Resources (OERs) specially for Indian school teachers and how can teachers use these Open Educational Resources (OERs) in teaching learning process.
