ABSTRACT

RFID Technology is wildly used in modern times. It has so many applications RFID applications have been in use for many years in transport (public transport entry), access control cards (building and highway entry), event ticketing and management, and, more recently, in government identity cards and passports and extensively in manufacturing supply chains and in logistics for goods distribution. Industry sectors differ widely in RFID deployment, with many automotive companies and hospitals relying on RFID systems. RFID plays an important role in modern times. The technology increases recently in all fields and also in the library field. The recent technology used in the library is RFID Technology which enhances the speed, accuracy, productivity, and efficiency of library staff. This study provides the information about how RFID technology applicable to modern libraries and how it becomes essential for library automation.
